DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-11 in Paper No. 13 is acknowledged.

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claim 1 and 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "first material" and the phrase "more conductive" is vague and indefinite; Because the conductive material is not specified and the term more conductive is a relative term.

3. Claim 2 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "conductive material form of plastic" is vague and indefinite; because plastic is well know material for insulating not conductive.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Page 3

Application/Control Number: 09/833,165

Art Unit: 2834

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-6 and 7-11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ward (4,947065) in view of Keljik (Electric Motors and Motor Controls 1995 page139 - 142).

As best understood, Ward shows a generator in fig.1 comprising: a stator body having a solid core (10) formed of iron powder/ thermo-plastic with a plurality of circumferentially spaced portions (14) at an outer peripheral surfaces, and a conductive material is deposited between the teeth (16) that's more conductive than the first material. Wherein, the insulating material (thermo-plastic) is place around the circumferentially spaced teeth, and a conductive material deposited between the teeth. Ward does not disclose a motor comprising a rotor.

Keljik teaches a motor comprising a rotor and a stator wherein the motor is the reverse process of the generator (page 139 line 11-20) for the purpose of delivering voltage and inducing the voltage into the rotor. Therefore, it would be obvious to one having ordinary skill in the art at the time the invention was made to modify the generator of Ward with the teaching of Keljik motor for the purpose of creating a rotating magnetic field.

Referring to claims 3,4,9, and 10, little patentable weight has been given to the method of manufacturing limitations (i. e. co-extrusion and power metal technology) since "even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of

Application/Control Number: 09/833,165

Art Unit: 2834

a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 703-306-5855. The examiner can normally be reached on 8:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nestor Ramirez can be reached on 703-308-1317. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-3431 for regular communications and 703-305-3431 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
